Final Project

December 10, 2022

Team: Roger Qiu, Verity Pierson, & Shailja Somani

Dataset Used: Details of house sales in King County, Washington between May 2014 and May 2015.

Project Github: https://github.com/shailja-somani-0/ADS500B-rog-ver-sha

1 Import and Clean Dataset

```
[63]: # Import packages necessary
import numpy as np
import pandas as pd
import matplotlib as mpl
import matplotlib.pyplot as plt
import seaborn as sns
import os
from IPython.display import display
from sklearn.model_selection import train_test_split
from sklearn.linear_model import LinearRegression
from sklearn.ensemble import RandomForestClassifier
from sklearn.metrics import mean_squared_error as MSE
import xgboost as xg
from sklearn.model_selection import GridSearchCV
[2]: # Check working directory if necessary - commented out as not necessary
```

```
[2]: # Check working directory if necessary - commented out as not necessary #os.getcwd()
```

```
[3]: #importing the csv file
df = pd.read_csv('house_sales.csv', header=0, sep=',')
df[:20]
```

```

 \hookrightarrowcorrelate with each other. This can give us an idea of a few variables that\sqcup
⇒we can use to try to predict prices.\nFor example: Price correlates strongly⊔
 ⇔with square footage and number of bathrooms")
```

Finally let's perform exploratory analysis in combination with visualization techniques to discover patterns and features of interest Let's look at the scatter plots and the correlations of price, sqft_living, and yr_built

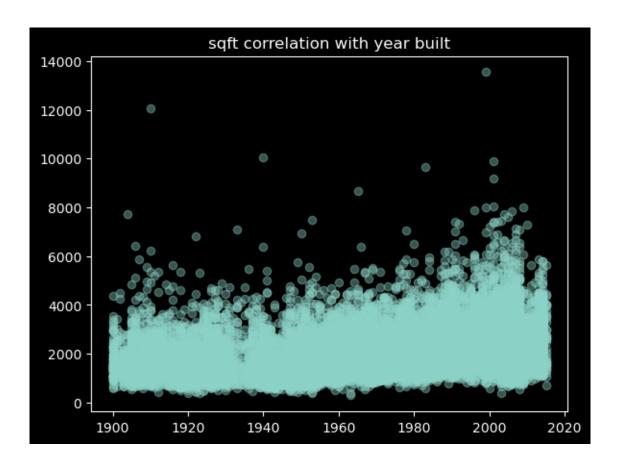

There seems to be a strong positive correlation between square feet and price. This confirms the previously calculated correlation of 0.7020

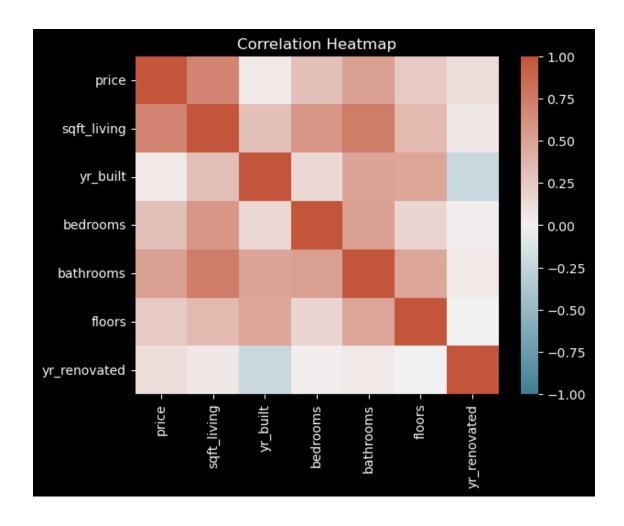

There seems to be a very small positive correlation between year built and price.

This confirms the previously calculated correlation of 0.0540

There seems to be a slightly positive correlation between floor year built and square feet.

This confirms the previously calculated correlation of 0.3180

With this heatmap, we can see how strongly a few select variables correlate with each other. This can give us an idea of a few variables that we can use to try to predict prices.

For example: Price correlates strongly with square footage and number of bathrooms
